

Bc. IVAN HOCHMAN

I'm a motivated programmer with a solid base in software development and data processing. I am currently working in my first full-time role, where I have grown into a medior-level developer by tackling real projects and learning from great teammates.

I'm always open to new opportunities that match my interests – whether it is in data, machine learning, or general software development. I like being part of a team where I can learn, contribute, and take on new challenges with a positive attitude.
